1968

PRO-GRO INTENSIVE CONTAINS:

Screened Sandy Loam, Ultra Life Compost, Specialty Screened Pumice

Sandy Loam – A natural, clean source located in Oregon

This is a true Willamette Valley Sandy Loam, not a clay and sand blend.

Ultra-Life Compost - Organic composts produced in Oregon

This is a blend of fungal dominant and bacterial dominant composts to provide the widest biological diversity for soil health. These materials are produced within 200 miles of Portland, Oregon

Specialty Screened Pumice – Produced in Oregon by an ecologically sensitive company

This product is located within 350 miles from Portland, Oregon.

Lab Reports available upon request.

Product Weights: All weights provided are estimates for discussion purposes only. Pro-Gro is confident these weights accurately represent our lab results; however, varying methods of product handling and installation, at the job site, can affect the resulting installed weight. Therefore, Pro-Gro is unable to guarantee the weight of the media. If certified weights are required, an independent lab may need to be retained.

Product Volumes: All product volumes are calculated, measured, and sold at the Pro-Gro Mixes facility. Pro-Gro guarantees the volumes sold to be accurate at the time the soil is loaded at the facility. Settling can occur during product shipping. The settling amount can vary depending on the delivery distance and road conditions.
